

# ITPV302 Implementation

## Students:

MNDAWENI, ZM
NAIDOO, MAX
ROGERS, NC

## Result

**100 %**

Item	Description	Max	Score
Introduction	The introduction starts with describing the purpose of this document and what it will cover.	5	5
Choice of Tools	In this section you should describe the tools you used to develop the application and why the specific choices were made, e.g. Visual Studio 2017, SQL Server 2015, etc. In each case use the name of the tool as a numbered sub-heading.	10	10
Extracts of Complex Code	This section should present extracts of code which you found to be complex to write. This needs to be your own code. Not code sourced from elsewhere. Think about things that happen in your system that might be different to what is found in other student's systems. For each code extract provide a descriptive overview of what happens in the piece of code.	10	10
Source Code Refs	If you used code, a query, markup, styling or anything similar from any other author / site, you should list the details here. Even if you modified the original text, you still need to credit the original author. There is no need to list the code (since it may be long), but for each piece of text you use that was originally created by someone else you need to provide the following: <ul style="list-style-type: none"><li>• A heading (sub-section) briefly stating what the code was used for</li><li>• A brief description on why the code was used</li><li>• Name of at least one page / place in your system in which it is used.</li><li>• An APA style reference on where you found the code</li></ul>	10	10
Problems Encountered	This section represents a bit of reflection on your part. Discuss anything in the development of your project which you struggled with. For each problem provide a numbered heading, a description of the problem and how you solved it (eventually). For this section it is fine to write in the first person.	10	10
Referencing and Styling	Perform proper citation and referencing using the APA style. Ensure consistency in the styling of your document, include elements such as headings, numbering, page numbers, etc.	5	5
<b>Total</b>		<b>50</b>	<b>50</b>

Fantastic job!
